Lab Assignment 1

Name: M Umar

Registration: FA24-BCS-080-B

Objective

To create a basic e-commerce homepage using semantic HTML5 elements without CSS styling.

Implementation

- **<header>** contains the website title and introductory content.
- **<nav>** contains at least four navigation links.
- **<main>** contains three sections: Featured Products, Shop by Category, and Newsletter Signup.
- **<footer>** contains at least three columns of links.
- **Other semantic elements** <section>, <article>, and <form> organize related content and the newsletter signup.

Validation

The HTML file was checked using the W3C HTML Validator. The result shown in the submitted screenshot states:

Document checking completed. No errors or warnings to show.

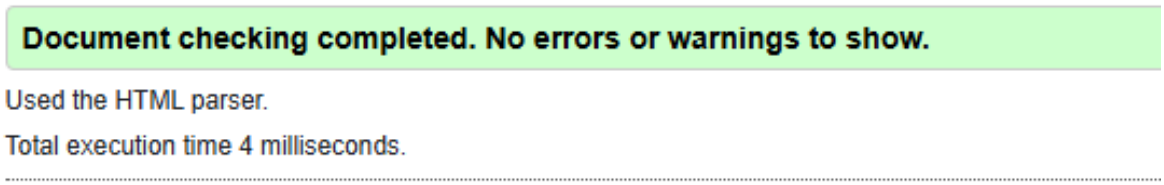

Figure 1. W3C HTML Validator result.

Conclusion

The semantic HTML5 scaffold for a generic e-commerce homepage was created and validated successfully. The validator reported no errors or warnings.
